

ĐOÀN THANH LÂM

BACKEND DEVELOPER — PHP / SYMFONY

District 10, Ho Chi Minh City | dthanhlam.1004@gmail.com | 0395 544 696
github.com/thanhlamcode | linkedin.com/in/thanhlaminvietnam | doanthanhlam.vercel.app

SUMMARY

Backend Developer with 1.5 years of production experience building an enterprise multi-tenant POS platform at Fastboy, specialising in event-driven architecture, CDC-based data pipelines, and REST API design. Delivered core transaction flows (order, refund, void), integrated CDC pipelines across multiple upstream services using Debezium + Kafka + Redpanda Connect, and shipped async workflows via Symfony Messenger + RabbitMQ. UEH Information Technology · GPA 3.69

EXPERIENCE

FASTBOY | Junior Backend Developer

Jan 2025 – Present

Enterprise multi-tenant POS platform · Symfony 7 + API Platform 4 · Ho Chi Minh City

- Designed and shipped REST endpoints for **order, refund, cancel, and void flows** — custom state providers, serialization groups, and Doctrine-backed state transitions in **API Platform 4**
- **Eliminated payment duplication** by implementing idempotent refund and void handlers with async retry via **Symfony Messenger + RabbitMQ**, covering partial refunds, gift card reversals, and mid-flight cancellations
- **Decoupled multiple upstream services** by building CDC consumer pipelines using **Debezium + Kafka + Redpanda Connect** over Postgres logical replication — enriching local data models without direct service coupling
- **Prevented cross-tenant data leaks** by designing a **merchant-scoped QueryExtension** that automatically enforces tenant isolation across all API endpoints in API Platform 4
- **Caught schema migration regressions early** by running **PHPUnit integration tests against real Postgres** — replacing mock-based tests that previously masked production migration failures
- **Cut production debugging time** by configuring **Grafana + Loki + Promtail** for cross-service log tracing and **Kafbat UI** for live Kafka connector inspection
- **Automated client distribution** by building a **GitHub Actions CI/CD pipeline** that compiles, packages, and deploys to **AWS S3** — enabling end-user auto-update and replacing manual distribution
- **Reduced release cycle effort** by scripting cherry-pick automation (develop → staging → production), Linear ticket sync, and automated PDF release-note generation

SPEEDYCONVERT.IO | Freelance Backend Developer

Dec 2024 – Jan 2025

Remote · 2 months

- **Built a greenfield Symfony backend** for a pre-launch web product — first production Symfony exposure, leading directly to the Fastboy role
- Implemented server-rendered views with Twig and technical SEO foundations (semantic markup, sitemap, structured data) ahead of launch

PROJECTS

RICEGUARD — Offline AI Rice Disease Detection

Jan 2026

YDCC 2025 · Top 40 / 430+ teams · UNDP Vietnam × MUFG Bank · Backend role · github.com/thanhlamcode/YDCC-2025

- **Built offline-first data layer** in **Rust + SQLite** covering diagnosis history, image cache, and treatment recommendations — designed for farmers without network coverage

- **Integrated YOLOv8n ONNX model** (~6MB) into Tauri Rust backend for on-device inference detecting 3 rice diseases — achieved **mAP50 = 80.2%** on a 1,956-annotation training set
- Stack: Tauri v2 (Android 7+), Rust, SQLite, ONNX Runtime, React + Vite + TailwindCSS

Other projects (live demos · [doanthanhlam.vercel.app](#))

- SnoopyShop — full-stack e-commerce (product catalog, cart, user auth) · React + Node.js · [snoopy-shop-thanhlam.vercel.app](#)
- 1000+ IT Jobs — IT job board · React · [it-job-thanhlam.vercel.app](#)

TECHNICAL SKILLS

Languages	PHP 8.4, SQL, JavaScript
Backend	Symfony 7, API Platform 4, Doctrine ORM, Lexik JWT
Databases	PostgreSQL 17 (logical replication), Redis, MySQL
Messaging/Streaming	Apache Kafka, Debezium (CDC), Redpanda Connect, RabbitMQ, Symfony Messenger
DevOps / CI	Docker, Docker Compose, GitHub Actions CI/CD, AWS S3, Git
Observability	Grafana + Loki + Promtail, Kafbat UI, Symfony Profiler
Testing	PHPUnit, integration testing with real Postgres

EDUCATION

UEH UNIVERSITY | Bachelor of Information Technology / Software Engineering

Oct 2022 – Apr 2026

GPA: 3.69 / 4.0

HONORS & AWARDS

- **Top 40 / 430+ teams** — YDCC 2025 national AI hackathon co-organised by UNDP Vietnam × MUFG Bank — built RiceGuard, offline AI rice disease detector for Mekong Delta farmers (Jan 2026)
- Featured contributor — Vietnam Tech Makers developer community (Symfony / backend topics)
- UEH Academic Encouragement Scholarship (Jul 2024)
- Prize A — Student Research on Accounting and Auditing (2023)
- Prize A — UEH Young Researcher Awards (2023)

CERTIFICATIONS

- TOEIC English Certificate — 610
- Udemy: The Ultimate MySQL Bootcamp — Go from SQL Beginner to Expert
- Udemy: The Web Developer Bootcamp 2024
